Community based infrastructure

BIOCONDA

Bioconda is a conda channel which provides software for biomedical research.

- 25,649 commits on GitHub
- 856 contributors
- > 7,300 packages

Biocontainers

BioContainers provides system-agnostic executable environments for bioinformatics software.

- Based on Docker & rkt
- > 33,000 containers
- Automatic builds from Bioconda

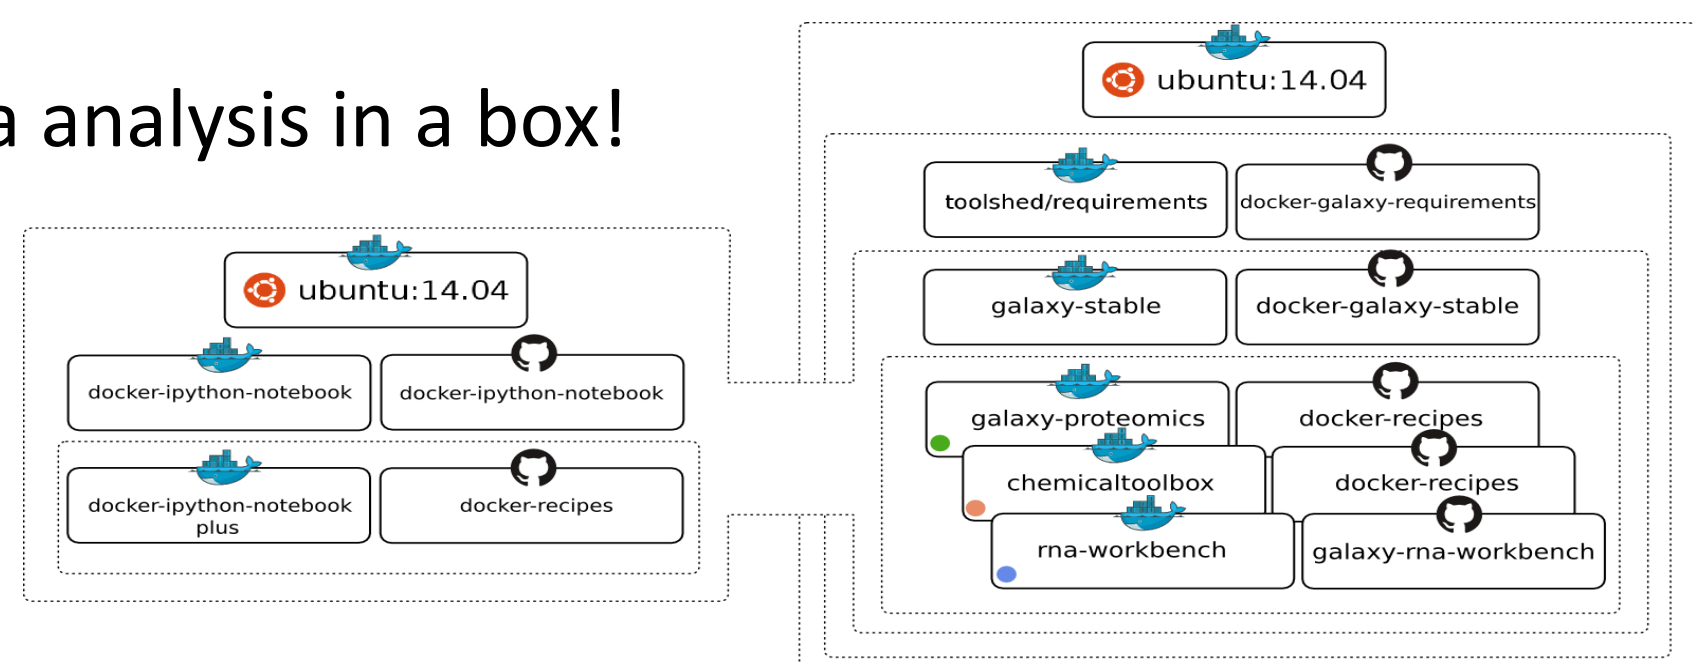

Galaxy is an open, web-based platform for data intensive research.

- 43,998 commits
- 223 contributors
- One of the biggest Galaxy instances available for de.NBI in Freiburg

The Galaxy Docker Project

The Galaxy Docker Image is an easy distributable full-fledged Galaxy installation, that can be used for testing, teaching and presenting new tools and features.

Portable data analysis in a box!

Based on the main Galaxy Docker virtualization, a dedicated flavor for epigenetics was developed: github.com/bgruening/docker-galaxy-epigenetic
